

Making Life's Simple Necessities.®

Research & Development Entry Level Engineer (NTC)

POSITION SUMMARY

Performs engineering work to develop opportunities to improve the quality or performance of pulp and paper products. Work is focused on filling the pipeline with process/product improvements. Work may include process design, process optimization, process modeling, chemical system improvements, new product development, safety and environmental compliance or other work related to process/product improvement.

This role typically reports to the leader of a specific technology platform.

Supervision is readily available but work execution is self directed. Specific projects and tasks are outlined by a supervisor and checked for completion. For typical decisions made in this role, information is analyzed and interpreted. Projects may require working independently or as part of a team.

CONTACTS

Continually advises or interprets information for directors, managers or supervisors. Occasionally advises or interprets information for outside vendors.

Requires interpersonal skills such as advising, counseling, exchanging information via various methods such as participating in meetings or group discussions and conducting meetings or leading group discussions to share process recommendations; and composing written communications such as technical writing.

BASIC QUALIFICATIONS

- A Bachelor's Degree in Chemical Engineering or Pulp and Paper Science
- Advanced degrees are encouraged to apply.
- A minimum core curriculum GPA of 2.8
- Available for travel for about 20% of your time including some international travel.

Georgia-Pacific is an equal opportunity employer
